MIDEA JL1745-S
WATER DISPENSER AND FILTER FOR THE
PREPARATION OF COLD, HOT, AND
SPARKLING WATER

SPECIAL DISCOUNT FOR HBA MEMBERS MAY 2023.

Midea is one of the world's leading cooling technology manufacturers, so it is not surprising that this filter has one of the best water cooling systems.

Midea JL1745-S is an elegant water dispenser, equally suitable for company and home use. It provides 1.5l of filtered water per minute, which means that you can fill glass after glass, so it is also suitable for sports facilities, playrooms, and other locations with high consumption of drinking water. In addition to filtration and cooling, this filter enables sparkling water production.

You can adjust the carbonate intensity in your drink and add concentrated juice as you wish (orange, lemon, cherry, etc.) to create a fresh drink according to the taste you want.

Water filtration is done in 2 stages.

Phase 1:

In the first stage, the Midea JL1745-S performs water filtration. With a filter that works on the basis of activated carbon, it retains all quality ingredients and removes particles from soil, rust, turbidity, etc.

Phase 2:

In the second stage, the filter with active carbon removes impurities, dust, particles, and other sediments. Thanks to this, it also removes free chlorine, smells, organic pollutants, insecticides, and chemicals.
